Jesus Perez – Full Stack Developer

Phone: 831-596-7518| Email: jesup032v@gmail.com| LinkedIn: linkedin.com/in/jesusmperez/

Result oriented software engineer with expertise in full stack web development, system optimization, test engineering, quality assurance, and cloud based systems. Skilled at evaluating, configuring, debugging and maintaining secure, high performing technology systems across enterprise environments. Demonstrated success in building test automation workflows, troubleshooting complex application issues, and implementing scalable solutions that improve operational efficiency and reliability. Known for bridging technical depth with clear communication and cross team collaboration. Proven track record in refactoring legacy systems, migrating monolithic applications, and delivering secure, data based solutions that improve software quality and operational efficiency for engineering and business teams.

TECHNICAL SKILLS

Programming Languages: *Java, C++, JavaScript, Python, Groovy*
Frameworks & Libraries: *Selenium,TestNG, Junit, Jest, PostgreSQL, Express.js, React, Node.js, Spring Boot, Redux, GraphQL, Typescript, Jenkins, SQL*

Cloud & DevOps: *AWS (EC2, RDS), CI/CD Pipelines, Docker, Kubernetes, Secure API Development & Integration, Postman, Splunk*

Core Competencies: *Test Automation & Engineering, Quality Assurance, Full Stack Development, Database Management, Data Structures, Object Oriented Programming, Agile Development & Team Collaboration, Unit, Integration & E2E Testing, Debugging & Root cause analysis, Systems Analysis & Design, Security & Data Integrity Practices, Technical Documentation & Requirements Analysis, AI assisted Development.*

EXPERIENCE

Technical Instructor (Full Stack) | CodePath in collaboration with Meta | March 2025 – July 2025

- Guided Facebook interns through hands on, real world projects, emphasizing scalable architecture, clean code & debugging practices and team based development workflows.
- Integrated industry aligned methodologies such as Git based version control, RESTful API design, and Agile development to bridge the gap between academic learning and professional application.

Software Engineer | Intuit | May 2018 – Sept 2024

- Modernized legacy operational tools by refactoring monolithic workflows into scalable, secure React and Java services, while designing and executing automated functional and end-to-end tests to validate API-driven workflows.
- Developed, tested, and maintained web-based platforms for data ingestion and migration, implementing automated API and regression testing to ensure secure RESTful integrations and enable 90% of users to transition from legacy screen-scraping systems to validated API based channels.
- Designed and implemented an internal integrated development studio using React, Redux, TypeScript, and Java, incorporating automated functional and end-to-end testing to validate connectivity workflows and reduce onboarding time from six months to hours.

EDUCATION

Bachelor of Science (BS), Computer Science | California State University, Monterey Bay
